SAVE THESE INSTRUCTIONS.
Refer to them often and use them to instruct others.

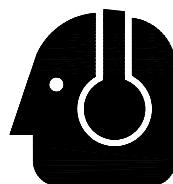

PROTECT EYES

Wear safety glasses or suitable eye protection when working on or around machinery.

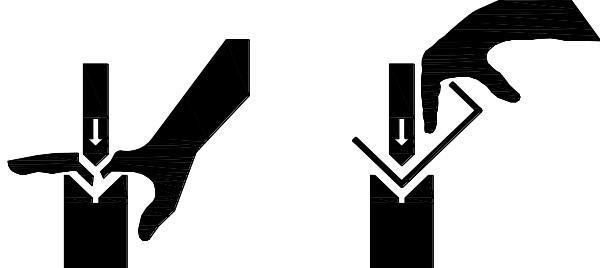

PROTECT AGAINST NOISE

Prolonged exposure to loud noise can cause impairment or loss of hearing. Wear suitable hearing protective devices such as ear muffs or earplugs to protect against objectionable or uncomfortable loud noises.

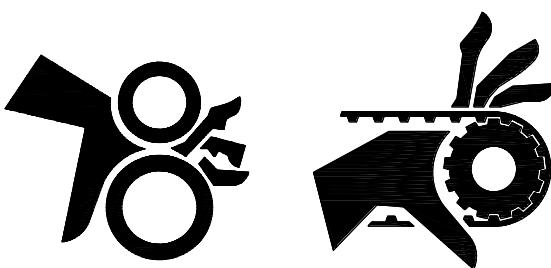

BEWARE OF CRUSH HAZARD

NEVER place your hands, fingers, or any part of your body in the die area of this machine. Be aware of the area on either side of the dies for crush points created by material movement.

BEWARE OF PINCH POINTS

Keep hands and fingers away from the drive mechanisms, cylinders, ratchets, and other moving linkage while the machine is in operation.

KEEP CLEAR OF MOVING OBJECTS

Always be aware of the position of the material and the swing area in which the material will travel. The material will swing with significant force. This swing area will create pinch points and the force of the material movement may cause serious bodily injuries.

HYDRAULIC HOSE FAILURE

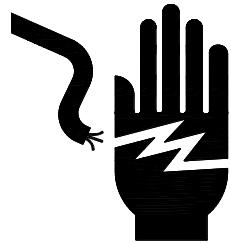

Exercise **CAUTION** around hydraulic hoses in case of a hose or fitting failure.

HIGH VOLTAGE

USE CAUTION IN HIGH VOLTAGE AREAS. DO NOT assume the power to be off.

FOLLOW PROPER LOCKOUT PROCEDURES.

SAFETY PRECAUTIONS

Metal working can be dangerous if safe and proper operating procedures are not followed. As with all machinery, there are certain hazards involved with the operation of the product. Using the machine with respect and caution will considerably lessen the possibility of personal injury. However, if normal safety precautions are overlooked or ignored, personal injury to the operator may result.

Safety equipment such as guards, hold-downs, safety glasses, dust masks and hearing protection can reduce your potential for injury. But even the best guard won't make up for poor judgment, carelessness or inattention. **Always use common sense** and exercise **caution** in the workshop. If a procedure feels dangerous, don't try it.

REMEMBER: Your personal safety is your responsibility.

WARNING: FAILURE TO FOLLOW THESE RULES MAY RESULT IN SERIOUS PERSONAL INJURY

- 1. Only trained and qualified personnel can operate this machine.**
- 2. Make sure guards are in place and in proper working order before operating machinery.**
- 3. Remove any adjusting tools.** Before operating the machine, make sure any adjusting tools have been removed.
- 4. Keep work area clean.** Cluttered areas invite injuries.
- 5. Overloading machine.** By overloading the machine you may cause injury from flying parts. **DO NOT** exceed the specified machine capacities.
- 6. Dressing material edges.** Always chamfer and deburr all sharp edges.
- 7. Do not force tool.** Your machine will do a better and safer job if used as intended. **DO NOT** use inappropriate attachments in an attempt to exceed the machines rated capacity.
- 8. Use the right tool for the job.** **DO NOT** attempt to force a small tool or attachment to do the work of a large industrial tool. **DO NOT** use a tool for a purpose for which it was not intended.
- 9. Dress appropriate.** **DO NOT** wear loose fitting clothing or jewelry as they can be caught in moving machine parts. Protective clothing and steel toe shoes are recommended when using machinery. Wear a restrictive hair covering to contain long hair.
- 10. Use eye and ear protection.** Always wear ISO approved impact safety goggles. Wear a full-face shield if you are producing metal filings.

11. **Do not overreach.** Maintain proper footing and balance at all times. **DO NOT** reach over or across a running machine.
12. **Stay alert.** Watch what you are doing and use common sense. **DO NOT** operate any tool or machine when you are tired.
13. **Check for damaged parts.** Before using any tool or machine, carefully check any part that appears damaged. Check for alignment and binding of moving parts that may affect proper machine operation.
14. **Observe work area conditions.** **DO NOT** use machines or power tools in damp or wet locations. Do not expose to rain. Keep work area well lighted. **DO NOT** use electrically powered tools in the presence of flammable gases or liquids.
15. **Keep children away.** Children must never be allowed in the work area. **DO NOT** let them handle machines, tools, or extension cords.
16. **Store idle equipment.** When not in use, tools must be stored in a dry location to inhibit rust. Always lock up tools and keep them out of reach of children.
17. **DO NOT operate machine if under the influence of alcohol or drugs.** Read warning labels on prescriptions. If there is any doubt, **DO NOT** operate the machine.
18. **DO NOT** touch live electrical components or parts.
19. **Turn off** power before checking, cleaning, or replacing any parts.
20. Be sure **all** equipment is properly installed and grounded according to national, state, and local codes.
21. **DO NOT** bypass or defeat any safety interlock systems.
22. Keep visitors a safe distance from the work area.

LUBRICATION AND MAINTENANCE

WARNING: Make sure the electrical disconnect is OFF before working on the machine.
Maintenance should be performed on a regular basis by qualified personnel.
Always follow proper safety precautions when working on or around any machinery.

Daily

- Check daily for any unsafe conditions and fix immediately.
- Check that all nuts and bolts are properly tightened.

Weekly

- Clean the machine and the area around it.
- Lubricate threaded components and sliding devices.
- Apply rust inhibitive lubricant to all non-painted surfaces.
- Check periodically for leaks. If a leak is detected, stop operation and repair the leak. On very hot days, gear oil may drip from the breather; this is normal expansion of the oil.
- Be sure to keep the slide blocks and lead screw lubricated with light hydraulic oil or equivalent.
- Check for any worn or damaged parts and replace immediately.

Quarterly

- There are two grease zerks on the machine that feed the main spindle bearing. Grease these zerks every three months with 3 - 4 pumps from a standard grease gun.

Note: Proper maintenance can increase the life expectancy of your machine.

Gear Box Oil

The main Planetary Gear Box is lubed with 80W90 gear lube. Check and replace the gear lube every 3 years or 200hrs of continuous use.

Hydraulic System Maintenance

This machine utilizes a self-contained hydraulic power unit; it is used to supply hydraulic pressure to 3 individual hydraulic circuits, the clamp die, mandrel extraction shaft and the pressure die. Their system pressure is set to 2800 psi.

3000 psi is the maximum output of this unit and is not recommended as the operating pressure. Pressure can be adjusted by loosening the outer locknut and rotate center screw until desired pressure is reached.

There are two gauges; one for system pressure and one for clamp die pressure. The only hydraulic circuit that is adjustable is the clamp die, adjust pressure by loosening the locknut and rotate center screw until desired pressure is reached.

The clamp die pressure cannot exceed the system pressure.

Figure 2 System pressure gauge

Figure 3 Clamp Die Pressure Gauge

Figure 4 Pressure adjusting screws

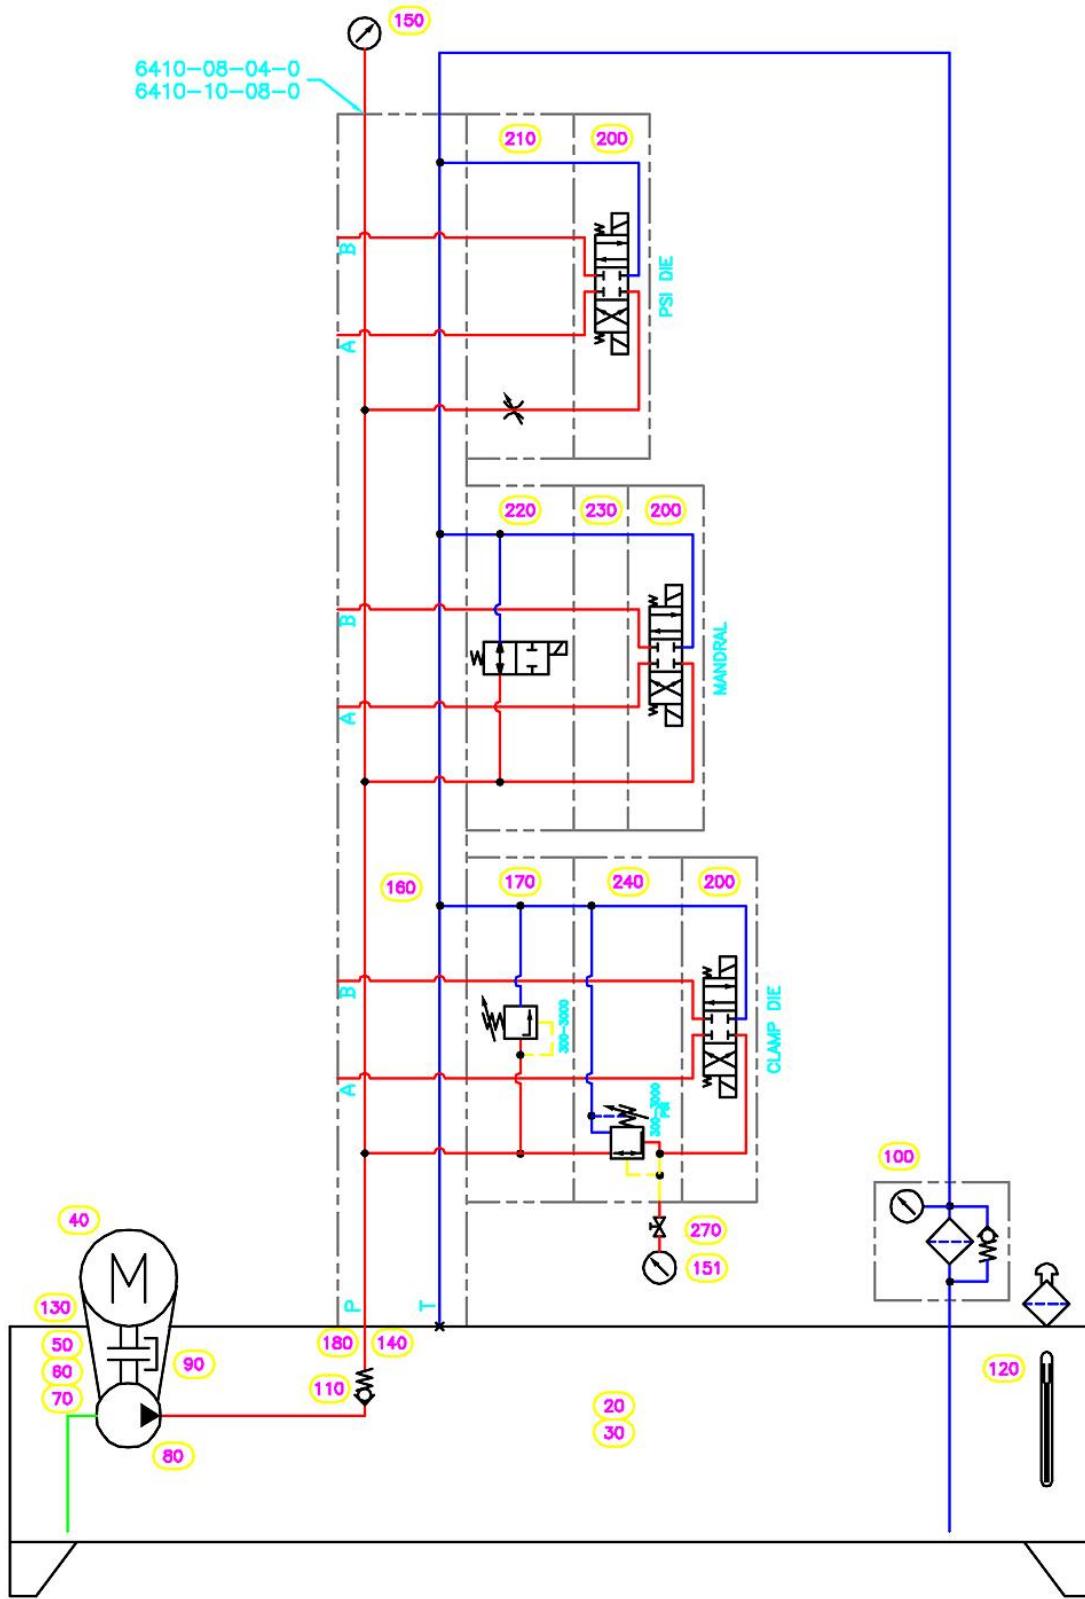

- Check fluid level periodically, Change only when filter gauge indicator is in the red. If the hydraulic motor overloads, it can be reset inside of the main cabinet.

IMPORTANT: NEVER OPERATE THE MACHINE WITH DAMAGED OR LEAKY HOSES AND/OR FITTINGS.

Trouble Shooting

Problem	Causes
Wrinkles on the inside of the bend	Wiper die has too much Rake Wiper die is not close enough to tangent Not enough pressure on pressure die Wrong size mandrel Clamp die slipping Too much wiper die lube Wall thickness of tubing doesn't match mandrel size
Clamp Die Slipping	Not enough pressure Tube too small Serrations/ knurling worn out on clamp die
Humps on the outside of the bend	Mandrel is too far forward
Flat on the outside of the bend	Mandrel is too far back
Machine doesn't move	Hydraulic conditions not met (green/red indicator lights) Communication Failure
Mandrel Lockup	Not enough lube on mandrel Pressure die set to loose Clamp die slipped Mandrel is too large for the tube being bent.
Hydraulics do not work	Hydraulic pump is off Overload tripped Pressure set too low Mechanical parts are jammed up
Machine Overloads	Tubing wall thickness is to heavy Bend speed is to high Too much pressure on the die Mandrel too large
